

Module 2 Sprint 1 Project
Adventure Works Human Resources Dashboard
Tableau Desktop

For the purposes of the first data visualisation project I have created Adventure Works' HR Dashboard and used Tableau Desktop Public as my tool.

My analysis includes hiring trends for the company as a whole. I have also looked at segments of the dataset: hiring broken down by gender, age group, department group, department, and job title.

Another path of discovery led me to examine salary levels broken down by departments and job titles by gender.

For date calculations I have assumed the current year to be 2013.

Clearly there are strong years for hiring.

This signifies a sudden need for additional workforce, most likely on account of increasing demand for Adventure Works' products.

In a future expansion of scope for this project it would be reasonable to look at demand and production figures in more detail to support the business assumption for the steep growth in hiring figures in 2008 and 2009.

As of 2013 there are 290 employees in the company with an average age of 35 years.

Men make up 71 per cent of the workforce. This is mainly determined by the fact that in the largest department women constitute only 25 per cent of staff.

We only have available data for employees who are currently active. The dataset does not contain terminated employees.

As can be expected in the case of a company in manufacturing, Manufacturing is the largest department with 186 employees. In the years of the strongest hiring the vast majority of people were employed by this department.

As for the salary analysis, in 5 of the 6 department groups there is a considerable gap between workers of the two genders. Women make a lot more in R&D and some more in Executive General & Administration and in Quality Assurance, while men make a lot more in Sales & Marketing and some more in Inventory Mgmt.

In Manufacturing people earn roughly the same annual salary \$28K vs \$29K.

As there are more men in C-suite positions, the average salary is higher for men: \$53 587 vs \$52 296 for women.
